

March 4th, 2023

I am here to voice my opinion very strongly against HB 6816!

This bill does not provide any benefits from a gun safety or accountability and will only serve to put more regulations and cost on gun manufacturers and legal, law abiding owners.

The technology for microstamping is far from being developed to the point where it could be an effective tool simply because it can be disabled very quickly by any one with intent to do so. For this reason it is only an impediment to legal gun owners by making firearms more expensive.

Changing the age an individual can buy a firearm to 21 serves no purpose except to prevent a segment of the adult population from being able to exercise their 2nd amendment rights. This is illegal and serves no purpose as there is no evidence that this segment is more likely than others to commit crime with a firearm. And it is illegal because it violates the 2nd amendment rights of this group of people.

Why on earth would we prevent people from being able to purchase a passive protection system to help protect against gunfire?? In a society where our government continues to NOT punish people who commit crimes with firearms, allowing them out on the streets; where the government floods our streets with illegal aliens from all over the world and allows this lawlessness to go unchecked, Why would the same government then restrict the rights of its own citizens from protecting themselves from criminals??! This is insane logic!

For all of these reasons I most strongly oppose HB 6816. This bill should never see the light of day!

Sincerely,

Daniel Poole
